

Dispatch — top bar, board, and Round Trips

Read off the live app. Confirmed: two nav rows with four duplicate tabs, buttons at 32px next to one at 36px, headers centered over left-aligned data, `draggable:false` on every column, and the Round Trips timeline genericised into a shared PlannerGrid.

1 · TOP BAR — ONE NAV, ONE TOOLBAR

+ Book Load

Eight buttons were three different kinds of thing in one row. Destinations (Overview, Live, Loads history, Planners) go in the nav. View modes of the same loads (List, Kanban, Round Trips) become one segmented control. + Book Load is an action, so it sits alone on the right as the only filled button on the page.

The height mismatch disappears by construction. Live now: seven buttons at 32px and  at 36px. A segmented control has one height; the action button is deliberately its own shape.

Overview becomes the landing. `/dispatch` redirects to Overview, `/dispatch/loads` is the board. Overview stops sitting next to view modes it has nothing in common with. And the subtitle goes — it describes the module to someone who already opened it.

2 · LOAD BOARD — 30 COLUMNS, GROUPED, DRAGGABLE

List	Kanban	Round Trips	Columns ▾											drag a header to reorder · drag its edge to resize	
ASSIGNMENT				HOURS OF SERVICE						LOAD					
UNIT	TRAILER	LOAD #	DRIVER	DRIVE	SHIFT	BREAK	CYCLE	STOP BY	RESUME AT	CUSTOMER	COMMODITY	WO #	LIVE LOG		
AWAITING ASSIGNMENT		16													
T171	—	—	Unassigned	—	—	—	—	—	—	—	—	—	—		
T163	—	—	Unassigned	—	—	—	—	—	—	—	—	—	—		
BOOKED		1													
T156	538306	13508	Angel A. Sosa	6:42	9:15	0:28	41:10	18:30	06:15	NCC Logistics	Auto parts	138458	Terre Ha		
IN SHOP		0													

Live location moved into Telemetry's neighbour slot and got a real label. You confirmed it is the truck's current GPS position — it was sitting in the Load group as a bare "Location", reading like a third address next to PU and Del.

Drag is back. Live now: `draggable:false`, `cursor:auto` on every header, though 90 resize handles exist. ParityTable already has reorder at `ParityTable.tsx:1190`. The board's hand-rolled table at `DispatchBoard.tsx:1157` never got it.

3 · ROUND TRIPS — THE TIMELINE THAT WAS REPLACED

UNIT	21	22	23	24	25	26	27	28	29	30	31	01	02	03
T156	NB · 13508 Indianapolis				TR · 13512 Waco			SB · 13520 Laredo						
T171	NB · 13518 Tallmadge — 9 days							SB · 13524 Laredo						
T163	TR · 13511 Keasbey				NB · 13526 Tallmadge									
T175	SB · 13471 Laredo				NB · 13542 Morrisville				TR · 13549					
NB — Northbound, starts the tour TR — Triangulation SB — Southbound, closes the settlement at Laredo leg running 7+ days														

This is what was there and what to recover. Cursor built it 2026-08-29 in `22a266132` — RoundTrips.tsx +264, RoundTripsTimeline.tsx +164 new. One day later `d41124e99` "GO-PLANNER-01-CANONICAL-GRID" cut it **+79 -123**, and the file now just feeds a shared `PlannerGrid`. Net across both files since: **-163 +106**.

What the generic grid took away. Its own sticky day header (`gridTemplateColumns: 7rem repeat(days, minmax(2.5rem,1fr))`), its own trip colours — NB `#1f2a44`, SB `#475569`, TR `#b45309` — and the long-leg flag that outlined any NB or SB leg running 7 days or more. A round trip is not a generic planner row: the whole point is seeing NB open a tour and SB close it.

Recover, don't rebuild. The code is in the history at `22a266132` and `67faa3dcd`. Restore the bespoke timeline, keep whatever genuine fixes landed after (the uuid-label fix in `82fda7c90` was real), and leave PlannerGrid for the planners that actually want a generic grid.
